CIS 236 - Introduction to MS Web Development

3 Credit Hours

This course builds on concepts presented in the CIS 131 C# Programming course by learning how to embed C# code within multi-page web applications. Students will learn how to use server controls, validation controls, master pages, site navigation and themes within ASP.NET/C#. Object-oriented concepts will be used to create multi-tiered applications.

Prerequisites: [CIS 131](#), [CIS 195](#)
